Property and Land Records Data

AIMS maintains an extensive geographic database of property data in Johnson County. Data licensees can purchase the data for use in their business practices.

Property data, also known as land record data, is not only used to represent geographic features, it can also be used to query and analyze the data that is contained with the property database. Land record data contains information about a property such as address, owner name, age of the improvements, property number, land value and the calculated area of the property.

Property data is available from AIMS in both digital and hardcopy formats. The property data can also be viewed through the AIMS on-line mapping application at: http:/maps.jocogov.org

Property and Land Record data contain features such as:

▸ **Property Boundaries and Dimensions**

▸ **Property ID Numbers**

▸ **Owner Names**

▸ **Addresses**

▸ **Land Values**

▸ **Year Built**

▸ **Area of Land**

▸ **Subdivision Boundaries and Names**

▸ **Picture of Improvements**
