Addresses/Street Centerline

AIMS maintains a county-wide address database that houses all situs addresses in the county. The address database includes addresses for condos, strip malls, duplexes, trailer parks and apartment complexes. The database is represented spatially by an X, Y point related to the address.

The Street Centerline database consists of a network of road segments represented by lines that contain the address range, street name, speed limit, and any information that is relevant to a road network file.

Addresses/Street Centerline Specifications:

- ▶ **Address Ranges**
- ▶ **Physical Addresses**
