

This past April, AIMS held the most recent in a series of focus groups with the Johnson County development community. Geared towards improving work flows, enhancing communication and developing useful data, these meetings have been instrumental in guiding AIMS in the development of tools that benefit both the local governments and the businesses they interact with.

AIMS invites you, or a representative from your organization, to join us on Thursday, October 25, 2007 from 8:30 a.m. until 10:00 a.m. at 11811 S. Sunset Dr. in Olathe (NW corner of 119th & Ridgeview). Come share your questions, experiences and suggestions regarding current and future AIMS services.

Topics to be addressed include:

Data Development

AIMS will discuss progress made on key datasets utilized by the development community including watershed information, the availability of new FEMA data, planimetric feature updates, and LIDAR.

AIMS Service Modifications

Delivering services via the web continues to evolve. AIMS will demonstrate and discuss changes to our website, formatting within DDR and the potential use and automation of new map formats.

Improving Communication within the Land Development Life Cycle

There are many times throughout the improvement of land when the engineering community needs to cooperate with government agencies, utility providers, and developers. Come observe the steps AIMS has taken thus far to influence this process and continue to assist our understanding of how you interact with these agencies.

So please join us on October 25th and help guide us in our efforts to provide GIS services to the engineering community and local governments.

Refreshments will be provided.

Please confirm your attendance by sending an RSVP to Traci Robinson (traci.robinson@jocogov.org) by October 22nd. Feel free to forward this invitation to others in your organization who might also benefit from attending.
